Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

3.264 Million cell updates/sec
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chain CDR3 fragment.

                                          The present invention describes a method of producing T cell epitopes, involving subjecting a precursor peptide to the action of a 20S proteasome, in order to locate the C-terminus of said epitope. This can be used in the production of vaccines, which can then be used to provoke a T cell response in the treatment of diseases such as cancer and
Sequence
                       infections. The present sequence is a peptide described in the exemplification of the invention.
                                                                                                                                                     Selecting and/or producing a T cell epitope useful in a vaccine comprises subjecting a precursor peptide or polypeptide to the action of a 20S proteasome to determine the location of the C-terminus -

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB

                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                          Score

Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody 2E1 light chain segments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0,
```

The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a

Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody 2E1 light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,
            The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 chain sequence.
                                                                                                                                                                                                                           Novel antibodies and compounds capable of binding to human interleukin-18 useful for treating, e.g., inflammatory disorders, neurological disorders, heart failure, myocardial infarction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-FEB-2001; 2001WO-US04170

Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody variable

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
```

This polypeptide sequence comprises the VL domain of human scFv antibody 14F12, which is specific for transforming growth factor (TGF) beta-2. It is encoded by a gene (AAT60375) isolated from a light chain shuffle repertoire of a peripheral blood lymphocyte

0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C library. The antigen-binding domains of human antibodies (see C AAW15522-40) to TGF beta-1 and/or beta-2 can be used to counter the C adverse effects of TGF beta, such as (i) promotion of fibrosis (in C dermal, ocular or keloid scarring, lung fibrosis, arterial injury, C distress syndrome, liver cirrhosis, post myocardial infarction, C cost-angioplasty restenosis, scleroderma, vascular disorders, C cataract, glaucoma, or esp. neural scarring and glomerulonephritis, C clase (not claimed) osteoporosis), or (ii) immune and inflammatory C diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases (cor macrophage pathogen infection). Nucleic acids encoding human cantibody VH and VL can be used for prodn, of recombinant antigen-constants (pref. less than 5 nM) and low IC50s for neutralisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            atches
                                                                                                              The present sequence represents an antibody variable light chain (VL) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific withdram machar communication the surface of the surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases

        The present sequence represents an antibody variable light chain (VL) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endotthelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferring the panel of the pane

          fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH cc different specific binding members, each comprising an antibody VH condition of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when the condition of the particles of the case of a specific bound to human serum amyloid profesin, to pass through a mammalian composition of the particles of the selection of the specific binding members with a desired property such as ability to bind areas of inflammation in the brain or EBB breakdown or cability to bind areas of inflammation in the brain or EBB breakdown or cability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and creceptor. The antibodies are useful in diagnosis, prophylaxis and creceptor is disease, prion disease, AIDS-related dementia, epilepsy cand traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             scleroderma; vascular didease; cataract; glaucoma; scarring; glomerulonephritis; osteoporosis; immune disease; inflammation; rheumatoid arthritis; macrophage deficiency disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transforming growth factor beta; TGF-beta; human; antibody engineering; scFv; phage display; lung fibrosis; arterial injury; proliferative retinopathy; retinal detachment; adult respiratory distress syndrome; liver cirrhosis; post myocardial infarction; post-angioplasty restenosis; post myocardial infarction; post-angioplasty restenosis;
                        This polypeptide comprises the VL domain of human scFv antibody vT37, which is cross-reactive with transforming growth factor (TGF) beta-2 and TGF beta-1. It is encoded by a gene (AAT60423) isolated from an scFv repertoire by phage display and soluble ELISA. The dissociation constant of the scFv is 4 nM for TGF beta-1 and 7 nM for TGF beta-2. VT37 does not bind to IGF beta-3. The antigens binding domains of human antibodies (see also AAM15522-40) to TGF beta-1 and/or beta-2 are useful in the treatment of fibrotic and immune or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TGF beta-1/TGF beta-2 cross-reaactive antibody VT37 VL domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        27-NOV-1997 (first entry)

cc sequences of anti-adipocyte monoclonal antibody heavy chain, light CC invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to the fat mass of an obese patient or the antibody CC adipocytes can be used to activate the immune system to destroy the cells CC by complement mediated lysis. The antibodies binding specifically to CC by complement mediated lysis. The antibodies may be labeled with a CC used in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes an be used to activate the immune system to destroy the cells CC determine the presence or level of adipocytes in a cell or tissue sample. The antibodies may be labeled with a CC used in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese CC patients other than undergoing surgery to remove excess fat. Antibodies abdominal fat associated with heart disease.
                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                               A phagemid library was constructed using lymphocyte RNA from a long-term asymptomatic HIV-1 positive donor. Heavy and light chain genes were cloned and a combinatorial library was prepared and screened to select antigen (HIV rev or tat) binders. Human soluble anti-HIV Fabs were obtained. Heavy chain VH sequences are given in AAR69084-87, light chain VL in AAR69088-92 and light chain
                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 11; Page 32-33; Table 2; 62pp; English

                                                                                                                        The present sequence is a human anti-HIV Fab light chain VL sequence. A novel gene therapy method has been produced, where a recombinant (rec) gene is introduced into the cells of a mammal. The method is improved by using a rec gene encoding an antibody (Ab) (e.g. the present sequence) that is selectively specific for an intracellular (IC) antigen associated with a disease. The method is used to prevent or halt the progress of a disease by IC immunisation. Specifically, the Ab can be used to inhibit the replication of a virus, such as human T-cell leukaemia virus or especially HIV-1, or of other pathogens, e.g. bacteria, fungi. The method provides immunity before or after the development of the disease and can be used to control the
                                                                                                                                                                                                                                                                                                  Improved gene therapy using recombinant gene coding for an antibody

This sequence was isolated using the method of the invention. The method of the invention is for isolating a substance (S1) that can adhere to a substance (S2) possessing physiological activity from a mixture containing S1. The method comprises contacting the mixture with a microsphere prepared by coupling S2 to a styrene-glycidyl methacrylate polymer through a spacer. The process is useful, e.g., for recovery of drug binding factors (such as proteins) from cell extracts. The process allows easy isolation, purification and identification of receptors to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolation and identification of receptors to specific compounds using microspheres prepared by coupling the compound, via a spacer, to a styrene-glycidyl methacrylate polymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1997-387634/36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-AUG-1997

                                                                                                                                                                                 The present sequence represents an apurinic/apyrimidinic endonuclease (APE). Levels of APE in dysplasia, caicinoma in situ and squamous cell carcinomas of the cervix and prostate are substantially elevated, relative to controls. A method for identifying a premalignant or malignant condition in a human subject comprises determining the level of APE in cells from the subject, where an elevated level of APE, as compared to the APE level in corresponding normal cells, indicates a premalignant or malignant condition. APE levels can be used in the diagnosis and therapy of tumours. They can also be used for detecting, inducing or inhibiting apoptosis in cells, e.g. for treating T-cells infected with HIV or detecting apoptosis in cells
                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                      Use of apurinic/apyrimidinic endonuclease - for developing products for the diagnosis and therapy of tumours, or for detecting, inducing or inhibiting apoptosis in cells
                                                                                                                                                                          that have been subjected to chemo-, radio- or gene therapy.

Title: Perfect score: US-09-780-035-12 64 1 QGDSLRHFYPN 11

Sequence:

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 105224 seqs, 38719550 residues

number of hits satisfying chosen parameters:

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 processed pseudogene (Apexpl).";

Submitted (FEB-1999) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: REPAIRS OXIDATIVE DNA DAMAGES IN VITRO. MAY HAVE A ROLE IN PROTECTION AGAINST CELL LETHALITY AND SUPPRESSION OF MUTATIONS.

REMOVES THE BLOCKING GROUPS FROM THE 3' TERMINI OF THE DNA STRAND BREAKS GENERATED BY IONIZING RADIATIONS AND BLEOMYCIN.

-i- CATALYTIC ACTIVITY: The C-O-p bond 3' to the apurinic or apyrimidinic site in DNA is broken by a beta-elimination reaction, leaving a 3'-terminal unsaturated sugar and a product with a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     number of hits satisfying chosen parameters:
